Overview

This publication is intended to provide a brief overview / summary of individual aircraft histories using information drawn from personal documents / records and other publicly available references identified at the end of the publication. In addition, this information has been further supplemented and / or verified against available RCAF incident / accident reports.

About the Author

Terry Leversedge was born in Moose Jaw, Saskatchewan, while his father was serving at Royal Canadian Air Force (RCAF) Station Moose Jaw. He later graduated from the Royal Military College, Kingston, with a degree in Mechanical Engineering in 1979, and then received a Masters degree in aerospace vehicle design from the Cranfield Institute of Technology in the United Kingdom. His career in military aerospace engineering encompassed a wide number of positions at both field units and within the headquarters of the RCAF, before he retired after 35 years of service at the rank of Brigadier General. Now an aviation consultant and amateur historian, he is the author of other commercially available books on Canadian military aviation subjects and has published numerous articles as the Editor-In-Chief at *Airforce* magazine, the flagship publication of the Royal Canadian Air Force Association.

With No. 416 Sqn when it crashed and was destroyed near CFB Cold Lake, AB during Maple Flag mission on 26 May 2003. Apparently lost control, performed several uncommanded high rate rolls, during return to base as part of 4 plane flight. From accident report: "The investigation team believes the accident flight profile was created by a flight control malfunction of the left horizontal stabilator which abruptly deflected to a full trailing edge down position, sending the aircraft into a violent, high negative G barrel roll to the right. It is believed the pilot was able to momentarily stop the aircraft's rolling motion near wings level, however... by the time the ejection was initiated, the aircraft had resumed the negative G roll to the right." The pilot, Capt. K.L. Naismith, was killed during the ejection; this was the first CF fatality during a CF-18 ejection.

Category "B" damage in mid-air with #188776 in August 1992. Reported at Canadair in February 1995. Received ECP upgrade. Operated by No. 425 Sqn at CFB Bagotville, QC in May 2006, still there in 2009. Used as CF-18 demonstration aircraft for 2010 season, received special paint scheme at Bagotville by April 2010, commemorating 100 th anniversary of RCN. Performed in Borden air show in June 2010. Crashed during airshow practice at Lethbridge, AB on 23 July 2010. The pilot, Capt B. Bews, ejected safely after engine failure during low speed high angle of attack pass. Pilot became tangled in chute lines on touchdown, but was dragged by wind in to a group of Canadian Forces Sky Hawks demonstration jumpers who had been watching the fly past. They are credited with stopping the pilot and applying immediate first aid. Investigation determined that crash resulted from failure of one engine to respond to throttle movement, due to a stuck piston within the fuel control unit.

Visited Edmonton City airport in July 2009, as part of display for car race held on the airport. At Cold Lake in 2010, operated by No. 409 Sqn. Reported active at CFB Cold Lake in April 2016, with 5,294 airframe hours. On 28 Nov 2016, this a/c was part of a two-ship formation for an unopposed air interdiction continuation training mission. The mission objective was to deliver two MK83 inert bombs followed by two laser-guided training rounds, simulating laser guided bombs, in the Cold Lake Air Weapons Range. To avoid the simulated bomb fragmentation after dropping their bombs the pilots were to fly a "safe escape maneuver" comprising a 5 g level turn (which required a 78 degree bank angle to maintain level flight) through 90 degrees of heading change. The a/c failed to execute the required escape maneuver and crashed into the ground while in a descending turn. The pilot, Capt. T. McQueen, failed to eject and was killed.

ADDITIONAL DEVELOPMENTS - ex-RAAF Interim Aircraft

In late 2017, the Government of Canada announced that it was procuring eighteen RAAF F/A-18 fighter aircraft (a mix of singles and duals) plus additional spares / parts from the Government of Australia in order to increase the availability of the CF-18 fleet. The ex-RAAF aircraft are the same configuration as Canada's current CF-18 fleet and can be integrated relatively quickly. Some modifications and technical work will be needed so they can be brought to the exact same configuration as Canada's CF-18 aircraft. These aircraft will then be integrated into the CF-18 fleet as modifications are completed and they will be employed at either 3 Wing Bagotville or 4 Wing Cold Lake.. In February, 2019, first two of these RAAF F/A-18A single-seat aircraft were flown to Cold Lake, AB, from Nellis, Nevada, where they were participating in Exercise *Red Flag*, The remaining aircraft are expected to arrive not later than the end of 2021.

ADDITIONAL NOTES

Aircraft (or Air Vehicle) Damage Level (ADL) Categories: ¹

The RCAF ADL is a qualitative categorization system used to determine the level of damage sustained by an aircraft / air vehicle during an occurrence. The following damage level definitions are used to reflect the degree of damage:

Category "A" = Destroyed / missing: The aircraft has been totally destroyed, is assessed as having suffered damage beyond economical repair or is declared "missing";

NB - Aircraft totally destroyed are normally written off the inventory. Accidents with a lower ADL may also subsequently result in administrative write-off of the aircraft for reasons not directly related to the damage.

Category "B" = Very Serious: The aircraft has sustained damage to multiple major components;

Category "C" = Serious: The aircraft has sustained damage to a major component;

Category "D" = Minor: The aircraft has sustained damage to non-major components; and

Category "E" = Nil: The aircraft, including the power plant, has not been damaged.

CF-188 Aircraft - No of Category "A" write-offs = 19 or (~14 % of the original fleet)

The RCAF / CF have lost a total of 19 CF-18 Hornets to various causes. Another aircraft, #188761, was also reported as a Category "A" write-off after an accident in 1987 but was later successfully repaired.

Instructional Airframe Categories

In the Canadian Armed Forces, airframes relegated to training purposes were categorized with an alpha-numeric serial number. The letter designation denoted one of four categories as follows:

"A" - identifies aircraft that are deemed repairable and potentially could be returned to flight status

"B" - identifies aircraft that are permanently assigned to the ground training role

"C" - identifies ground training aircraft that have been sectioned

"D" - identifies aircraft consigned as demolition targets
