D.F.S.										ROYAL CANADIAN AIR FORCE									
OFL										<p>During take-off. Instructor throttled back port engine to simulate engine failure at 200-300' with speed of 115-110 K. Pilot checked rings &amp; applied rudder trim &amp; feathered port engine with r/bd eng running at 45 ms &amp; 2650 rpm. a/c began to lose height &amp; pilot brought nose up with trim &amp; speed dropped. Check pilot attempted to unfeather port eng but failed, not do so in time. He took over controls to crash land and a/c missed into small trees.</p> <p>Pilot was not fully aware of single eng procedure &amp; brought nose up thereby cutting speed. Check pilot feathered engine at too low altitude &amp; failed to take over soon enough to recover.</p> <p>Pilot was not fully aware of single eng procedure.</p>
